

Professional Service:

Custom Integrations

What we offer

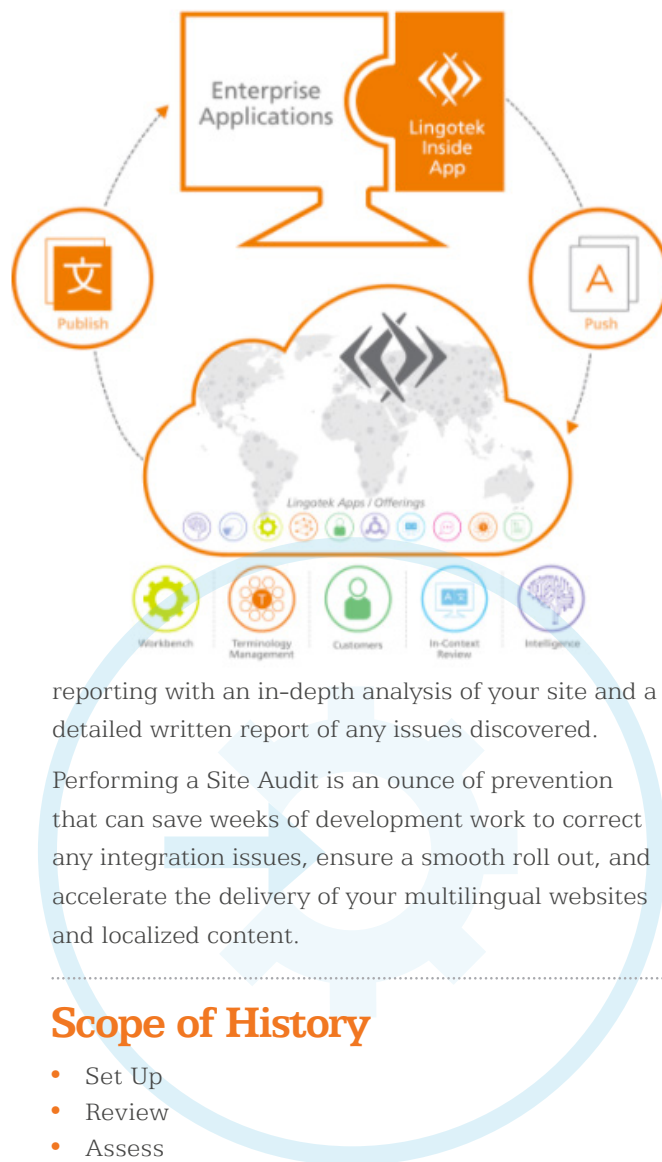

Customized integrations with our industry-leading TMS. The multilingual Lingotek API is an easy-to-use, powerful way for you to integrate your enterprise applications with the Lingotek translation management system (TMS). This single point, multilingual API allows you to easily upload source content for translation, have the content automatically translated, & download the translated content back into the original application.

Through our multilingual API, you can access all the powerful translation tools within the Lingotek TMS. Features like translation workflows, centralized cloud-based translation memory (TM), and machine translation (MT), are all at your fingertips.

Site Audit

To ensure that your localization project is a success, Lingotek recommends a multilingual readiness Site Audit. It is a critical first step to determine your site's readiness for localization.

Enterprise sites are often highly customized with a mix of technologies and capabilities. The Site Audit will quickly identify any potential issues that may prevent the site from functioning with multilingual content. The Site Audit includes set up, review, assessment, and

reporting with an in-depth analysis of your site and a detailed written report of any issues discovered.

Performing a Site Audit is an ounce of prevention that can save weeks of development work to correct any integration issues, ensure a smooth roll out, and accelerate the delivery of your multilingual websites and localized content.

Scope of History

- Set Up
- Review
- Assess
- Report
